Table II.-- Statistics of phosphates for the United States.1 In tons of 2,240 pounds. Production statistics of 1901 and subsequent years, except 1905 to 1913, are those of the U. S. Geological Survey and are based on marketed products. Neglecting the insignificant exports of foreign products. The various deposits of phosphate differ considerably in their geologic occurrence and age, as well as in their physical properties and chemical composition. The value of a phosphate deposit depends primarily on the grade of the rock, but the mode of occurrence, accessibility, and distance to markets are also factors of the utmost importance in determining its economic value. The location and character of the American phosphate deposits, their geological occurrence and origin, the methods of mining and extracting the rock, and the cost of production at the various phosphate fields have been described in...
