It is straightforward in go through easier to recognize. I actually have study and that i am sure that i will going to study yet again again down the road. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Excerpt: . . . chapter xxviii navigation It is quite impossible in a single chapter to give more than a general idea of the art of navigation. An attempt will be made to describe only the salient points and leave the reader to follow up the explanations and details to be found in any modern book on navigation. Much of the art of navigation has been reduced to a science, and science requires accurate instruments for the purpose of collecting data to be used in mathematical calculations. Instruments used in navigation include the following: compass, chronometer, sextant, log, lead, parallel rulers, dividers, barometer. Every navigator should be supplied with a good pair of day glasses and a pair of night binoculars. Charts of the vicinity are of course essential. The above is not the complete outfit provided a modern man-of-war; it is the lowest minimum for navigation. Persevering practice is required to make one expert in the use of nautical instruments. The navigator uses the nautical mile as the unit of distance. The geographical mile is the length of a minute of arc of the earth's equator. It is 6087.2 feet. The nautical mile is the length of a minute of arc of the earth's meridional circumference. The nautical or sea mile varies in length with the latitude. At the equator it is 6046 feet, increasing to 6109 feet at the poles. This is of no importance to the navigator who uses the mean, or 6076.8...
