RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Original publisher: Washington, D. C. : U. S. Dept. of Transportation, Federal Aviation Administration, 1991. OCLC Number: (OCoLC)270720433 Subject: Airplanes -- Fuel systems. Excerpt: . . . 8 5 91 AC 23-10 cognizant certification office during certification. Verification of adequate bonding should be accomplished during installation and when maintenance is performed on the auxiliary fuel system in the airplane. (i) Wiring Isolation in Fuel or Fuel Vapor Environment. (A) Electrical wiring in fuel or fuel vapor environment should be adequately protected to prevent damaged wire (s) from igniting fuel fuel vapor. Installation of the electrical wiring in a sealed metallic conduit is an acceptable method to meet this criteria. The conduit seal should be sufficiently airtight that combustion cannot be maintained. (B) Flexible conduit conforming to specification MIL-C-6136, Conduit; Electrical, Flexible, Shielded, Aluminum Alloy for Aircraft Installation, Types I or II, or equivalent, may be used where it is impractical to use rigid conduit, such as, areas that have motion between conduit ends or where complex bends are necessary. (C) Conduit installation considerations include the following: (1) Metallic conduit should have a low-resistance bond of less than. 003 ohm to airplane structure. (2) To prevent wire chafing at the conduit ends, suitable end fittings should be installed so that a smooth surface comes in contact with the wire (s) inside. When fittings are not used, flare the end of the conduit to prevent wire insulation damage. (3) The conduit should be supported by clamps along the conduit run to prevent chafing against structure and to avoid stressing the end fittings. (2) Lightning Vulnerability (23. 954...
